

Onboarding Runbook: Vertex Global Logistics (ENT-8992-AZ)

1. Account Overview

- **Client ID:** ENT-8992-AZ
- **Company Name:** Vertex Global Logistics
- **Onboarding Tier:** Enterprise Dedicated
- **System Timezone:** Asia/Kolkata
- **Infrastructure Target:** Azure Cloud
- **Ingestion Protocol:** SFTP
- **Current Status:** Initial configuration received, but critical technical blockers identified.

2. Critical Blockers

The following technical issues are preventing successful onboarding and require immediate attention:

- **Missing API Key for Ingestion:**
 - **Detail:** The `ingestion_settings.api_key_provided` field is explicitly set to `false`. An API key is typically mandatory for secure authentication and data transfer, especially for SFTP or any API-driven ingestion. Without it, data ingestion cannot proceed securely or at all.
 - **Risk:** Prevents secure data connectivity and initial data transfer.
- **Failed Data Pipeline Test:**
 - **Detail:** The `inventory_sync_prod` data pipeline, which is marked as active, has a `last_test_run` status of failed. This indicates a fundamental issue with the data processing, mapping, or connectivity for a critical production pipeline.
 - **Risk:** Data will not flow correctly, leading to integration failures and delays in go-live.

3. Action Items for the Onboarding Team

To unblock the onboarding process for Vertex Global Logistics, the following actions are required:

1. **Obtain and Validate API Key:**
 - **Action:** Immediately contact Vertex Global Logistics' technical point of contact to request the necessary API key for SFTP ingestion.

- **Verification:** Once received, validate the API key's format, permissions, and ensure it's active.
- **Update:** Update the `ingestion_settings.api_key_provided` status to true in the configuration once confirmed.
- **Owner:** Onboarding Specialist / Technical Account Manager
- **Due Date:** EOD Today

2. Investigate and Resolve Pipeline Failure:

- **Action:** Access the logs for the `inventory_sync_prod` pipeline's last test run to identify the specific error causing the failure.
- **Collaboration:** Work closely with Vertex Global Logistics' technical team to troubleshoot the root cause (e.g., incorrect data format, schema mismatch, connectivity issues, authentication errors, mapping logic).
- **Remediation:** Implement necessary fixes (e.g., adjust mapping, update credentials, resolve network issues).
- **Retest:** Rerun the pipeline test and confirm a successful run.
- **Owner:** Onboarding Technical Analyst / Solution Architect
- **Due Date:** Within 24-48 hours
